

## **ENVIRONMENTAL POLICY**

### **TOWARD TO A RESPONSIBLE CONSUMPTION**

#### **Commintment with enviroment and responsable consumption**

Since our company started its economic activity in 2009, its foundational enviromental proposal has been twofold:

On the one hand, to keep alive the awarenness in all company employees, about the positive impactc that a good managment of the energetic resources can have on the economic and social viability of the company.

On the other hand, the importance of a good training in the recycling of waste, both of the company and of those that have been woven in coordination with the needs of the clients in order to comply with the requirements of environmental legislation.

Througout the years, our conmintment with enviroment has been specifying in a more flexible recycling and waste collection projects that have allowed us to better adapt to the needs of the moment and of the client.

This history has became our compnay in a reference business in sustainability.

Our deontological code base its integrity in:.

- ✓ Compliance with the requirements of the standard ISO 14001
- ✓ Municipal energy saving ordinances
- ✓ European pollution prevention legislation

#### Enviromentals Goals

The environmental goals proposed by our company for the next 5 years are:

#### CONTINUOUS TRAINING

Our long term training planning in environmental culture, waste recycling and saving resourcing.

#### VEHICLE FLEET CONTRIBUTION TO ENVIRONMENTAL DECONTAMINATION

Our company has decided to reorient the economic investment policy towards the purchase of ecological assets, which especially affects its transport fleet:

- ✓ Low emissions vehicles that allow cars and trucks run around city
- ✓ Purchase hybrid vehicles at mid term
- ✓ Proposal of a long-term horizon for the widespread use of electrical vehicles.

#### Integration in our clients' waste collection and recycling systems

Even though our company keeps into an OWN PROCESS of improvement of the waste collection and recycling system, our main effort has lately focused on integrating our own segregation and collection practices in the clients' system, both corp offices and private services companies that provide support to a health public system.

As most of our clients have a well organized and duly registered selective collection system, our will has been, at all times, to reinforce it with our particular contribution.

In order to get it, our employees have changed their conscienceness and have to internalize new mentalities.

Currently, most of them have already assumed the importance of adequately treating the waste generated by their neighbours, trying to work in a segregation by typologies and to assure their collection, treatment and reuse in a future economic activity.

#### REUSE OF CLEANING UTENSILS

All the material and utensils that have not exhausted their useful life, especially those that have just had 1 or 2 uses: microfiber cloths, cotton rags, cotton and microfiber mops, and, also, work uniforms are undergoing a recovery process and once they are ready to be used again, company reuses them as a new material.

#### ENERGY RESOURCES CONSUMPTION

##### **Water**

Our organization emphasizes the efficient and, at the same time, responsible consumption of water, basic resource in the development of the most known cleaning process.

##### 1. Efficient consumption

Because if the employee does not change water, as many times as necessary, (most of our employees do not do it with a recovery bucket) calening and/or desinfectyion does not produce positive results.

## 2. Responsable use

Because water overconsum has a social and economic overcost for society.

### **Electricity**

Electricity consumption is planned to avoid possible waste with on and off times that takes advantage of the ambient temperature prior to the end of the work day.

## CHEMICAL PRODUCT VALIDATION

Our chemical products used in cleaning services have the guarantee of the sanitary spanish registre, that is to say, they are products with a minimum load of environmental contamination and danger to human health.

health.

Finally, our company keeps updating the whole environmental law including in corrent UNE-EN ISO 14001, which i the base of our environmental policy.
